newly graduated students will be able to apply to high-level doctoral programmes worldwide or can envisage working in companies looking for the know-how we teach.

The track is accessible to all students open to mobility, possessing a bachelor of science in mathematics or equivalent. A good command of English is required.

Eight dynamic cities with a lively university tradition

We propose a two-year world-class Master course in Algebra, Geometry and Number Theory, based on a long experience in teaching at this level.

The teaching staff is very active in research, students profit from its many connections with research centres throughout the world. Foreign scholars are also invited to deliver intensive courses integrated in the programme.

Students will attend courses in at least two partners universities following individually tailored study programmes. Upon completing the requirement of the programme, they will be awarded a double and/or joint nationally recognized degree.

We also offer an Erasmus Mundus Joint Doctoral Programme
