TABLE OF CONTENTS

1. INTRODUCTION ......................................................................................... 7

2. CLASSIFICATION AND APPLICATION OF THE TSP AND EP ........ 13
   2.1. TSP .................................................................................................. 13
   2.2. EP ................................................................................................... 20
   2.3. VRP .................................................................................................. 24
   2.4. Summary ........................................................................................ 28

3. Immune systems ................................................................................. 29
   3.1. The natural immune system of the vertebrate organism .............. 29
   3.2. AIS .................................................................................................. 32

4. MODELLING METHODOLOGY ............................................................... 34
   4.1. Basic concepts of the graph theory .............................................. 34
   4.2. Stages of the modelling methodology ......................................... 37
      4.2.1. Topology .............................................................................. 39
      4.2.2. Clustering ........................................................................... 41
      4.2.3. TSP ...................................................................................... 45
      4.2.4. EP ....................................................................................... 49
      4.2.5. Evaluation and constraints .................................................... 53
      4.2.6. The procedure for choosing the best solution ...................... 57
      4.2.7. Summary .............................................................................. 58

5. EVALUATION OF CALCULATION EFFICIENCY ............................... 59
   5.1. Data representation using a graph .............................................. 59
   5.2. Efficiency with different criteria and constraints ....................... 63
      5.2.1. Weighted criterion ................................................................. 63
      5.2.2. Fuzzy criterion ................................................................... 71
      5.2.3. Optimality in the sense of Pareto ......................................... 73
   5.3. Evaluation of the calculation efficiency of the Taguchi method ...... 73
      5.3.1. Numerical model ................................................................. 75
      5.3.2. Selection of the best parameters of the methods being compared ... 78
