

eSesja

1. Logging

Logging into the system can be done in two ways:

- On Android devices - after downloading a specially dedicated application from the website <https://esesja.polsl.pl/esesja.apk>
- On all other devices - using a web browser and the website <https://esesja.polsl.pl>

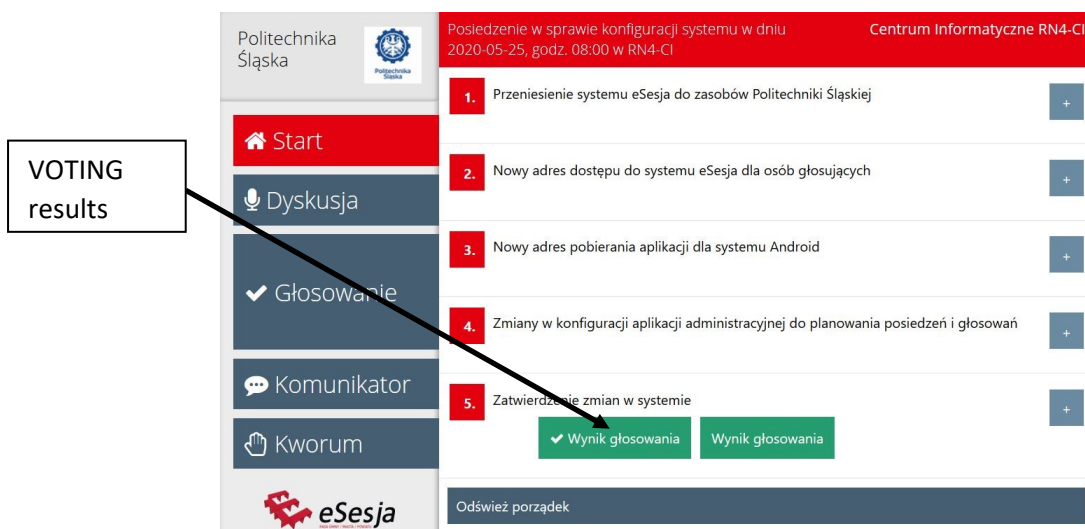

After switching on, a window appears which requires entering login and password, individually assigned to each user.

2. Voting

This button starts the voting. In case the voting does not start automatically, e.g. due to poor internet connection, click the Vote button. Then you will see the buttons for voting.

Once a vote is cast, the voting system closes and the bottom right corner shows how that user voted. The agenda is available at any time and can be refreshed.

After all authorized voters have cast their votes, a summary appears. The appearance depends on whether the vote was by name or unnamed.
