

Jennifer Sargent is Founder of BabelFisk, which offers strategic advice in areas spanning precision medicine to public and global health, in addition to promotion of diverse, equitable and inclusive research. Jennifer has deep interests in reducing health disparities, both globally and within countries. She works with a range of clients including inter-governmental organisations and academic and philanthropic sectors. Jennifer has a decade of editorial experience with high profile academic medical journals, including *The Lancet* and *Nature Reviews Endocrinology* and, most recently, was Deputy Editor at *Nature Medicine*, where she led a team of editors handling manuscripts in public health and clinical content covering cardiometabolic disease, nutrition, neurology, child health, women's health and precision medicine. Jennifer completed her undergraduate and Honours studies in biochemistry at the University of Queensland (Brisbane, Australia) and earned her PhD in genetics from Dartmouth College (Hanover, NH, USA) prior to doing postdoctoral studies in immunology at the National Institutes of Health (Bethesda, MD, USA).
